### Opis produktu

25mm High Fidelity dome tweeter with a very small glass fibre reinforced plastic chassis. The neodymium magnet allows a high quality speaker in a very compact design. This unit gives new possibilities in loudspeaker cabinet design, and is well suited for use in automobile sound. The construction of the magnet system gives very low magnetic stray fields since the magnet is enclosed in a soft steel housing. Thus, this unit is immediately ready for Audio-video systems. The aluminium diaphragm with critically designed shape and thickness behaves like a piston throughout the audible frequency range, resulting in good dispersion above 10 kHz.

A hexa grid protects the diaphragm, and supports a phase plate which compensates for a slight axial roll off towards 20 kHz. A specially designed soft polyamide surround allows a low fundamental frequency and excellent mechanical linearity. The voice coil is immersed in magnetic fluid, allowing high power handling capacity and simplified crossover design.
